Business Analyst (Associate) — Financial Services & Capital Markets

SUMMARY

Financial analyst with a Computer Science engineering background, working where business requirements meet system delivery in financial services. Experienced in eliciting requirements from business and technology stakeholders, documenting functional and non-functional specifications, and translating them into data models, dashboards and reporting packs that are used in production. Comfortable across the full delivery cycle — requirement capture, user stories and acceptance criteria, AS-IS / TO-BE process modelling, UAT and defect triage — and fluent in the capital markets vocabulary (equities, valuation, risk and regulatory reporting, trade and portfolio data) that a banking-domain BA needs. Strong SQL, Power BI and Excel, with daily use of AI assistants to speed up requirement drafting, test-case generation and documentation.

EDUCATION

B.Tech, Computer Science and Engineering — National Institute of Technology, Kurukshetra | 2022 – 2026 | CGPA 8.2/10
Relevant coursework: Database Management Systems, Software Engineering, Data Structures and Algorithms, Operating Systems — the systems grounding behind requirement analysis, data modelling and SDLC work.

AREAS OF EXPERTISE

Requirements Elicitation • User Story Writing • Acceptance Criteria • Process Modelling (AS-IS / TO-BE) • Gap & Impact Analysis • BRD / FRD / SRS • Stakeholder Management • Backlog Grooming • Traceability Matrix • UAT & Defect Management • Change Delivery • Full SDLC (Agile & Waterfall) • Data Analysis & Reporting • Capital Markets & Risk Domain

CORE SKILLS

Business Analysis: Requirement workshops and interviews, functional & non-functional specification, user stories with acceptance criteria, AS-IS / TO-BE process mapping, gap analysis, requirement traceability, BRD/FRD documentation
Delivery & Testing: Agile (Scrum/Kanban) and Waterfall SDLC, sprint planning and backlog grooming, test scenario and UAT script preparation, UAT coordination, defect logging, triage and retest, release and change support
Tools: Jira, Confluence, Power BI, Advanced Excel (modelling, Power Query), SQL, Python (pandas), MS Visio / Lucidchart, PowerPoint, Bloomberg Terminal
AI Productivity: Microsoft Copilot and LLM-assisted requirement drafting, user-story and test-case generation, document and transcript summarisation, data QA — applied to shorten analysis and documentation cycles
Domain: Equities and capital markets, valuation and financial modelling, risk and regulatory reporting, trade and portfolio data, AML/KYC concepts, MIS and management reporting
Stakeholder Mgmt.: Business and technology workshops, requirement sign-off and prioritisation, client-facing reporting, cross-team and vendor coordination, escalation and status reporting

PROFESSIONAL EXPERIENCE

Financial Analyst — Investment Banking Division, BlueStock.in, Gurugram | Aug 2025 – Present

- Elicit requirements from deal, research and operations stakeholders and convert them into documented specifications for financial models, MIS templates and reporting packs used across live mandates.
- Map existing reporting and data-collection processes end to end (AS-IS), identify manual effort, control gaps and redundancies, and define the TO-BE workflow adopted by the team.
- Translate business asks into structured work items with clear acceptance criteria, prioritise them with the team against delivery deadlines, and track status through to sign-off.
- Build and maintain Excel and Power BI reporting assets — defining data sources, calculation logic, validation rules and refresh cadence — and run acceptance checks with business owners before release.
- Prepare test scenarios for new and amended reports, run user acceptance testing, log and triage defects, and verify fixes before deliverables go to clients.
- Maintain a change and defect log for recurring reporting issues, document root causes and resolutions, and turn them into reusable SOPs and templates.
- Analyse large transaction, market and portfolio datasets in SQL and Excel to validate reported numbers and resolve data-quality queries raised by stakeholders.
- Act as the link between research, operations and client-facing teams so requirement changes, dependencies and deadlines stay aligned across functions.

Finance Research Intern — IIM Bangalore Associate Programme (Remote) | May 2024 – Sept 2024

- Produced 12+ institutional-grade equity research reports, each built from a documented framework covering business model, sector sizing, financial statement analysis, valuation and risk.
- Defined the data requirements and source hierarchy (annual reports, exchange filings, concall transcripts, sector databases) used to standardise report structure and output across the cohort.
- Built driver-based earnings and valuation models (DCF, relative multiples) with documented assumptions, so reviewers could trace every output back to its input.
- Presented findings to programme mentors, captured structured review feedback and incorporated it into subsequent drafts within fixed turnaround deadlines.

Finance Executive — A Digital Blogger, Mohali | May 2023 – Jul 2023

- Collected input requirements from internal stakeholders and turned them into structured, publishable financial product deliverables and client reports.
- Reconciled campaign and lead data against finance records, flagged discrepancies for correction and tracked them to closure.

PROJECTS AND VENTURES

- **Lead Funnel Analytics Dashboard (Power BI + SQL):** defined metric requirements from a stakeholder brief, wrote the SQL to assemble the dataset, modelled stage-wise conversion and drop-off, and walked business reviewers through the logic, measures and queries.
- **Safe Horizon — Risk Advisory Venture (Founder):** building a practice covering risk identification, control documentation and reporting frameworks for small and mid-sized clients; own service design, client discovery, requirement scoping and deliverable templates.
- **SME Consulting LLP (Co-founder):** scope client requirements across finance, compliance and process improvement, document current-state processes and convert findings into structured engagement plans with defined milestones.

CERTIFICATIONS

Financial Modeling and Valuation Analyst (FMVA), CFI • Bloomberg Market Concepts (BMC) • J.P. Morgan Investment Banking and Markets virtual experience programmes (Forage) • NISM Series XV — Research Analyst (certification preparation completed) • The Valuation School — Equity Research Cohort
